

Environmental Policy

We source the ingredients for our breakfasts locally wherever possible and are aware of 'food miles'.

We provide maps and encourage guests to leave their car and to walk to town since it's only a few minutes away and to support the high street independent shops.

Bus services are regular albeit infrequent. We provide local transport maps and happy to provide guests with public transport times.

We use low-energy equivalent light bulbs where suitable. Some lighting in our public areas are controlled by time-switches.

Radiators have thermostatic controls.

Glass, paper, tins, cardboard and plastic bottles are all recycled with the use of the Council kerbside collection or local recycle centre. Office paper and envelopes are reused where possible and printer cartridges recycled.

When electrical appliances are replaced we do so with low energy rated products.

The use of cleaning agents is minimised by the use of microfiber cloths.

We welcome suggestions on how our green policy could be improved, and energy or resource consumption reduced.
